

# 積算温度表の使い方

- ① 予測する田の出穂期を確認
- ② 同じ列の目標とする積算温度を確認
- ③ 同じ行の目標積算温度に達する日（収穫適期のめやす）を確認

例) 標高170m 出穂期 8 月 3 日のコシヒカリ

→ 高温登熟の場合、9 月 6 日 (950℃)

通常の場合、9 月 9 日 (1,000℃) が収穫のめやすとなる

| 成熟期<br>(月/日) | 出穂期(月/日) |       |       |       |       |       |       |       |       |       |      |      |      |      |      |
|--------------|----------|-------|-------|-------|-------|-------|-------|-------|-------|-------|------|------|------|------|------|
|              | 8        |       |       |       |       |       |       |       |       |       |      |      |      |      |      |
|              | 1        | 2     | 3     | 4     | 5     | 6     | 7     | 8     | 9     | 10    | 11   | 12   | 13   | 14   | 15   |
| 9/1          | 878      | 850   | 822   | 794   | 766   | 738   |       |       |       |       |      |      |      |      |      |
| 9/2          | 903      | 876   | 848   | 819   | 791   | 763   |       |       |       |       |      |      |      |      |      |
